

boost::statechart::  
event< EvWaypoint194  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint194< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint194["cl_move_base_z::EvWaypoint194< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint194 --|> boost_statechart_event
```

The diagram shows a base class box at the top with a light gray background and a derived class box at the bottom with a dark gray background. A blue arrow with an open triangular head points from the derived class to the base class. The base class box is divided into three horizontal sections; the top section contains the text 'boost::statechart::event< EvWaypoint194 < TSource, TOrthogonal > >', while the other two sections are empty. The derived class box is divided into three horizontal sections: the top section contains 'cl\_move\_base\_z::EvWaypoint194 < TSource, TOrthogonal >', the middle section contains '+ waypointIndex', and the bottom section is empty.

cl\_move\_base\_z::EvWaypoint194  
< TSource, TOrthogonal >

+ waypointIndex
