

```
boost::statechart::  
event< EvTopicMessage  
< TSource, TObjectTag > >
```

A UML class diagram showing inheritance. The base class, `boost::statechart::event< EvTopicMessage< TSource, TObjectTag > >`, is represented by a white box with a black border and is divided into three horizontal compartments. The top compartment contains the class name, the middle is empty, and the bottom is empty. The derived class, `smacc::default_events::EvTopicMessage< TSource, TObjectTag >`, is represented by a grey box with a black border and is divided into three horizontal compartments. The top compartment contains the class name, the middle contains the attribute `+ msgData`, and the bottom contains the method `+ getEventLabel()`. A blue arrow with a hollow triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
smacc::default_events  
::EvTopicMessage< TSource,  
TObjectTag >
```

```
+ msgData
```

```
+ getEventLabel()
```
