

boost::statechart::
event< EvWaypoint252
< TSource, TOrthogonal > >

```
classDiagram
    class BoostStatechartEvent["boost::statechart::event< EvWaypoint252< TSource, TOrthogonal > >"]
    class ClMoveBaseZEvWaypoint252["cl_move_base_z::EvWaypoint252< TSource, TOrthogonal >"]
    BoostStatechartEvent <|-- ClMoveBaseZEvWaypoint252
```

The diagram illustrates a generalization relationship between two event classes. The top class, `boost::statechart::event< EvWaypoint252 < TSource, TOrthogonal > >`, is shown in a white box with a thin border. The bottom class, `cl_move_base_z::EvWaypoint252 < TSource, TOrthogonal >`, is shown in a gray box with a thick border. A blue arrow with an open triangular head points from the bottom class to the top class, indicating that the bottom class inherits from or specializes the top class. The bottom class also features a public attribute `+ waypointIndex` in its second compartment.

cl_move_base_z::EvWaypoint252
< TSource, TOrthogonal >

+ waypointIndex
