

boost::statechart::  
event< EvWaypoint228  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint228< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint228["cl_move_base_z::EvWaypoint228< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint228 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: `boost::statechart::event< EvWaypoint228 < TSource, TOrthogonal > >`. It has two empty compartments below the text. At the bottom is a grey box representing the derived class: `cl_move_base_z::EvWaypoint228 < TSource, TOrthogonal >`. This box has three compartments: the first contains the class name and template parameters, the second contains the public member `+ waypointIndex`, and the third is empty. A blue arrow with an open triangular head points from the top of the grey box to the bottom of the white box, indicating that `cl_move_base_z::EvWaypoint228` inherits from `boost::statechart::event`.

cl\_move\_base\_z::EvWaypoint228  
< TSource, TOrthogonal >

+ waypointIndex
