

```
cl_move_base_z::CostmapSwitch  
::registerProxyFromDynamicReconfigure  
Server
```

A diagram showing a call from the `initialize` function to the `registerProxyFromDynamicReconfigureServer` function. The `initialize` function is in a white box on the right, and the `registerProxyFromDynamicReconfigureServer` function is in a gray box on the left. A blue arrow points from the `initialize` box to the `registerProxyFromDynamicReconfigureServer` box.

```
cl_move_base_z::CostmapSwitch  
::initialize
```
