

```
boost::statechart::  
event< EvWaypoint91  
< TSource, TObjectTag > >
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvWaypoint91< TSource, TObjectTag > >`, is represented by a white box with a black border. It has two empty rectangular compartments below the header. The derived class, `move_base_z_client::EvWaypoint91< TSource, TObjectTag >`, is represented by a gray box with a black border. It has a header compartment, a compartment containing the public attribute `+ waypointIndex`, and an empty compartment at the bottom. A blue arrow with a hollow triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
move_base_z_client  
::EvWaypoint91< TSource,  
TObjectTag >
```

```
+ waypointIndex
```
