

```
boost::statechart::  
event< EvActionFeedback  
< ActionFeedback, TOrthogonal > >
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvActionFeedback< ActionFeedback, TOrthogonal > >`, is represented by a white box with three horizontal compartments. The top compartment contains the class name. The derived class, `smacc::default_events::EvActionFeedback< ActionFeedback, TOrthogonal >`, is represented by a grey box with three horizontal compartments. The top compartment contains the class name, the middle compartment contains the public members `+ client` and `+ feedbackMessage`, and the bottom compartment is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
smacc::default_events  
::EvActionFeedback< ActionFeedback,  
TOrthogonal >
```

```
+ client  
+ feedbackMessage
```
