

boost::statechart::  
event< EvWaypoint178  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint178< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint178["cl_move_base_z::EvWaypoint178< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint178 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class `boost::statechart::event< EvWaypoint178 < TSource, TOrthogonal > >`. It has two empty compartments below the header. At the bottom is a grey box representing the derived class `cl_move_base_z::EvWaypoint178 < TSource, TOrthogonal >`. It has a header compartment, a compartment containing the public attribute `+ waypointIndex`, and an empty bottom compartment. A blue arrow with an open triangular head points from the derived class box up to the base class box, indicating inheritance.

cl\_move\_base\_z::EvWaypoint178  
< TSource, TOrthogonal >

+ waypointIndex
