

boost::statechart::  
event< EvWaypoint232  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint232< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint232["cl_move_base_z::EvWaypoint232< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint232 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the bottom is a class box for `cl_move_base_z::EvWaypoint232` with a public attribute `+ waypointIndex`. A blue arrow with an open triangular head points from this class to a base class box at the top. The base class box is for `boost::statechart::event` with template parameters `< EvWaypoint232 < TSource, TOrthogonal > >`. The base class box is divided into three horizontal sections, with the first section containing the class name and parameters, and the other two sections being empty.

cl\_move\_base\_z::EvWaypoint232  
< TSource, TOrthogonal >

+ waypointIndex
