

boost::statechart::
event< EvFail >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvFail >"]
    class sm_packml_EvFail["sm_packml::EvFail"]
    boost_statechart_event <|-- sm_packml_EvFail
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvFail >`, is represented by a white rectangular box with a thin gray border and is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. The derived class, `sm_packml::EvFail`, is represented by a gray rectangular box with a thick black border and is also divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. A blue arrow with a hollow triangular head points from the top of the `sm_packml::EvFail` box to the bottom of the `boost::statechart::event< EvFail >` box, indicating that `sm_packml::EvFail` inherits from `boost::statechart::event< EvFail >`.

sm_packml::EvFail
