The diagram shows a base class at the top and a derived class at the bottom. The base class is defined as `boost::statechart::event< EvWaypoint224 < TSource, TObjectTag > >` and has two empty sections below its name. The derived class is defined as `cl_move_base_z::EvWaypoint224 < TSource, TObjectTag >` and has a public attribute `+ waypointIndex` in its second section. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.
