

boost::statechart::  
event< EvWaypoint245  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint245< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint245< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a UML class hierarchy. The base class, 'boost::statechart::event< EvWaypoint245 < TSource, TOrthogonal > >', is represented by a white box with a thin grey border. It has two empty compartments below the header. The derived class, 'cl\_move\_base\_z::EvWaypoint245 < TSource, TOrthogonal >', is represented by a grey box with a thick black border. It has a header compartment, a compartment containing the attribute '+ waypointIndex', and an empty bottom compartment. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance.

cl\_move\_base\_z::EvWaypoint245  
< TSource, TOrthogonal >

+ waypointIndex
