

```
boost::statechart::  
event< EventA< TSource,  
    TObjectTag > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EventA< TSource, TObjectTag > >"]
    class smacc_state_reactors_event["smacc::state_reactors::EventA< TSource, TObjectTag >"]
    boost_statechart_event <|-- smacc_state_reactors_event
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `boost::statechart::event< EventA< TSource, TObjectTag > >`. It has two empty rectangular slots below the text. A dark gray box at the bottom represents the derived class `smacc::state_reactors::EventA< TSource, TObjectTag >`. It also has two empty rectangular slots below the text. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating that `smacc::state_reactors::EventA` inherits from `boost::statechart::event`.

```
smacc::state_reactors  
::EventA< TSource, TObjectTag >
```
