

```
boost::statechart::  
event< EventC< TSource,  
    TObjectTag > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EventC< TSource, TObjectTag > >"]
    class smacc_state_reactors_EventC["smacc::state_reactors::EventC< TSource, TObjectTag >"]
    smacc_state_reactors_EventC --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `boost::statechart::event< EventC< TSource, TObjectTag > >`. A dark gray box at the bottom represents the derived class `smacc::state_reactors::EventC< TSource, TObjectTag >`. A blue arrow with an open triangle head points from the derived class to the base class, indicating that `smacc::state_reactors::EventC` inherits from `boost::statechart::event`.

```
smacc::state_reactors  
::EventC< TSource, TObjectTag >
```
