

boost::statechart::
event< EvWaypoint221
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint221< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint221< TSource, TObjectTag >"]
    Base <|-- Derived
    Derived + waypointIndex
```

The diagram shows a base class box at the top and a derived class box at the bottom. A blue arrow with an open triangular head points from the derived class box to the base class box. The base class box is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. The derived class box is also divided into three horizontal sections: the top section contains the class name, the middle section contains the attribute '+ waypointIndex', and the bottom section is empty. The entire diagram is set against a white background.

cl_move_base_z::EvWaypoint221
< TSource, TObjectTag >

+ waypointIndex
