

sc::event< EvWaypoint120
< TSource, TObjectTag > >

```
classDiagram
    class sc_event["sc::event< EvWaypoint120< TSource, TObjectTag > >"]
    class cl_move_base_z_EvWaypoint120["cl_move_base_z::EvWaypoint120< TSource, TObjectTag >"]
    cl_move_base_z_EvWaypoint120 --|> sc_event
```

The diagram consists of two class boxes. The top box, representing the base class, is divided into three horizontal sections. The first section contains the text 'sc::event< EvWaypoint120 < TSource, TObjectTag > >'. The second and third sections are empty. The bottom box, representing the derived class, is divided into three horizontal sections. The first section contains the text 'cl_move_base_z::EvWaypoint120 < TSource, TObjectTag >'. The second section contains the text '+ waypointIndex'. The third section is empty. A blue arrow with an open triangular head points from the top of the bottom box to the bottom of the top box, indicating an inheritance relationship.

cl_move_base_z::EvWaypoint120
< TSource, TObjectTag >

+ waypointIndex
