

```
boost::statechart::  
event< EvWaypoint184  
< TSource, TObjectTag > >
```

The diagram shows a class hierarchy. At the bottom is a grey-shaded box representing the base class `cl_move_base_z::EvWaypoint184`. It has a public attribute `+ waypointIndex`. Above it is a white box representing the derived class `boost::statechart::event< EvWaypoint184 < TSource, TObjectTag > >`. A blue arrow with an open triangular head points from the base class box to the derived class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint184  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
