

```
boost::statechart::  
event< EvTopicMessage  
< TSource, TOrthogonal > >
```

The diagram shows two class boxes. The top box is for `boost::statechart::event< EvTopicMessage< TSource, TOrthogonal > >` and has three empty compartments. The bottom box is for `smacc::default_events::EvTopicMessage< TSource, TOrthogonal >` and contains a private attribute `+ msgData` and a public method `+ getEventLabel()`. A blue arrow with an open triangular head points from the bottom box to the top box, indicating inheritance.

```
smacc::default_events  
::EvTopicMessage< TSource,  
TOrthogonal >
```

```
+ msgData
```

```
+ getEventLabel()
```
