

boost::statechart::
event< EvWaypoint202
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint202< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint202< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a UML class hierarchy. The base class, 'boost::statechart::event< EvWaypoint202< TSource, TOrthogonal > >', is represented by a white box with a thin grey border. It has three horizontal compartments: the top one contains the class name, and the two below it are empty. The derived class, 'cl_move_base_z::EvWaypoint202< TSource, TOrthogonal >', is represented by a grey box with a thick black border. It also has three horizontal compartments: the top one contains the class name, the middle one contains the attribute '+ waypointIndex', and the bottom one is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint202
< TSource, TOrthogonal >

+ waypointIndex
