

```
boost::statechart::  
event< EvWaypoint194  
< TSource, TObjectTag > >
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvWaypoint194 < TSource, TObjectTag > >`, is represented by a white box with a thin border. It has two empty compartments below the header. The derived class, `move_base_z_client::EvWaypoint194< TSource, TObjectTag >`, is represented by a gray box with a thick border. It has a header compartment, a compartment containing the attribute `+ waypointIndex`, and an empty bottom compartment. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating inheritance.

```
move_base_z_client  
::EvWaypoint194< TSource,  
TObjectTag >
```

```
+ waypointIndex
```
