

boost::statechart::
event< EvWaypoint147
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint147< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint147["cl_move_base_z::EvWaypoint147< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint147 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint147 < TSource, TOrthogonal > >`, is shown in a white box with a thin grey border. It has two empty compartments below the header. The derived class, `cl_move_base_z::EvWaypoint147 < TSource, TOrthogonal >`, is shown in a grey box with a thick black border. It has a header compartment, a compartment containing the public member `+ waypointIndex`, and an empty bottom compartment. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint147
< TSource, TOrthogonal >

+ waypointIndex
