

```
boost::statechart::  
event< EvKeyPressU<  
    TSource, TObjectTag > >
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvKeyPressU< TSource, TObjectTag > >`, is shown in a white box with a thin gray border. The derived class, `keyboard_client::EvKeyPressU< TSource, TObjectTag >`, is shown in a gray box with a thick black border. A blue arrow with an open triangular head points from the derived class to the base class, indicating that `keyboard_client::EvKeyPressU` inherits from `boost::statechart::event`. Both class boxes are divided into three horizontal compartments, with the top compartment containing the class name and the remaining two compartments being empty.

```
keyboard_client::EvKeyPress  
U< TSource, TObjectTag >
```
