

boost::statechart::
event< EvWaypoint221
< TSource, TOrthogonal > >

```
classDiagram
    class BaseEvent["boost::statechart::event< EvWaypoint221< TSource, TOrthogonal > >"]
    class DerivedEvent["cl_move_base_z::EvWaypoint221< TSource, TOrthogonal >"]
    DerivedEvent --|> BaseEvent
```

The diagram illustrates a generalization relationship between two event types. The base event type, located at the top, is `boost::statechart::event< EvWaypoint221< TSource, TOrthogonal > >`. It is represented in a box with three horizontal compartments; the top compartment contains the event name, while the middle and bottom compartments are empty. The derived event type, located at the bottom, is `cl_move_base_z::EvWaypoint221< TSource, TOrthogonal >`. It is represented in a box with three horizontal compartments: the top compartment contains the event name, the middle compartment contains the attribute `+ waypointIndex`, and the bottom compartment is empty. A blue arrow with an open triangular head points from the derived event type to the base event type, indicating that the derived event is a specialization of the base event.

cl_move_base_z::EvWaypoint221
< TSource, TOrthogonal >

+ waypointIndex
