

sc::event< EvWaypoint120  
< TSource, TObjectTag > >

```
classDiagram
    class sc_event["sc::event< EvWaypoint120< TSource, TObjectTag > >"]
    class cl_move_base_z_EvWaypoint120["cl_move_base_z::EvWaypoint120< TSource, TObjectTag >"]
    cl_move_base_z_EvWaypoint120 --|> sc_event
```

The diagram illustrates an inheritance relationship. The base class, `cl_move_base_z::EvWaypoint120`, is shown in a grey-shaded box with a black border. It contains a public member `+ waypointIndex`. The derived class, `sc::event`, is shown in a white box with a grey border. A blue arrow with an open triangular head points from the base class to the derived class, indicating that `sc::event` inherits from `cl_move_base_z::EvWaypoint120`.

cl\_move\_base\_z::EvWaypoint120  
< TSource, TObjectTag >

+ waypointIndex
