    class DerivedEvent["cl_move_base_z::EvWaypoint210< TSource, TOrthogonal >"]
    DerivedEvent --|> BaseEvent
```

The diagram illustrates a generalization relationship between two event types. The base event type, located at the top, is `boost::statechart::event< EvWaypoint210 < TSource, TOrthogonal > >`. The derived event type, located at the bottom, is `cl_move_base_z::EvWaypoint210 < TSource, TOrthogonal >`. A blue arrow with an open triangular head points from the derived event type to the base event type, indicating that the derived event is a specialization of the base event. The derived event type also includes a public attribute `+ waypointIndex`.
