

boost::statechart::
event< EvGlobalError >

```
classDiagram
    class BoostEvent["boost::statechart::event< EvGlobalError >"]
    class SmEvent["sm_dance_bot_strikes_back::EvGlobalError"]
    BoostEvent <|-- SmEvent
```

The diagram illustrates a generalization relationship between two event types. The top box, representing the base event type, is white with a black border and contains the text "boost::statechart::" followed by "event< EvGlobalError >". It is divided into three horizontal sections. The bottom box, representing the derived event type, is gray with a black border and contains the text "sm_dance_bot_strikes" followed by "_back::EvGlobalError". It is also divided into three horizontal sections. A blue arrow with an open triangular head points from the top of the bottom box to the bottom of the top box, indicating that the bottom box inherits from or specializes the top box.

sm_dance_bot_strikes
_back::EvGlobalError
