

```
boost::statechart::  
event< EvWaypoint153  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by a light gray box with a black border, containing the text 'boost::statechart::event< EvWaypoint153 < TSource, TObjectTag > >'. It has two empty rectangular compartments below the text. The derived class is defined by a gray box with a black border, containing the text 'cl_move_base_z::EvWaypoint153 < TSource, TObjectTag >' in the top compartment, '+ waypointIndex' in the middle compartment, and an empty compartment at the bottom. A blue arrow with a hollow triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint153  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
