

boost::statechart::
event< EvWaypoint217
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint217< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint217< TSource, TObjectTag >"]
    Derived --|> Base
```

The diagram shows a base class box at the top and a derived class box at the bottom. The base class box is divided into three horizontal sections: the top section contains the class name, the middle section is empty, and the bottom section is empty. The derived class box is divided into three horizontal sections: the top section contains the class name, the middle section contains the member variable '+ waypointIndex', and the bottom section is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint217
< TSource, TObjectTag >

+ waypointIndex
