

boost::statechart::
event< EvWaypoint92
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint92< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint92< TSource, TObjectTag >"]
    Derived --|> Base
```

The diagram shows a base class box at the top with the text 'boost::statechart::event< EvWaypoint92 < TSource, TObjectTag > >'. It has two empty compartments below the text. Below this box is a derived class box with a black border and a light gray fill. The derived class box has three compartments. The top compartment contains the text 'cl_move_base_z::EvWaypoint92 < TSource, TObjectTag >'. The middle compartment contains the text '+ waypointIndex'. The bottom compartment is empty. A blue arrow with an open triangle head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint92
< TSource, TObjectTag >

+ waypointIndex
