

boost::statechart::  
event< EvWaypoint110  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint110< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint110< TSource, TOrthogonal >"]
    Base <|-- Derived
```

The diagram illustrates an inheritance relationship. A base class box at the top contains the text 'boost::statechart::event< EvWaypoint110 < TSource, TOrthogonal > >'. A blue arrow with an open triangular head points from a derived class box below to the base class box. The derived class box is divided into three horizontal sections. The top section contains 'cl\_move\_base\_z::EvWaypoint110 < TSource, TOrthogonal >'. The middle section contains '+ waypointIndex'. The bottom section is empty.

cl\_move\_base\_z::EvWaypoint110  
< TSource, TOrthogonal >

+ waypointIndex
