

boost::statechart::
event< EvWaypoint240
< TSource, TOrthogonal > >

The diagram shows a class hierarchy. At the top is a box representing the base class `boost::statechart::event< EvWaypoint240 < TSource, TOrthogonal > >`. It has three horizontal compartments, with the first containing the class name. Below it is a box representing the derived class `cl_move_base_z::EvWaypoint240 < TSource, TOrthogonal >`. This box has three compartments: the first contains the class name, the second contains the attribute `+ waypointIndex`, and the third is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint240
< TSource, TOrthogonal >

+ waypointIndex
