

boost::statechart::
event< EvWaypoint216
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint216< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint216< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint216< TSource, TOrthogonal > >`, is shown in a white box with a thin grey border. It has two empty compartments below the header. The derived class, `cl_move_base_z::EvWaypoint216< TSource, TOrthogonal >`, is shown in a grey box with a thick black border. It has a header with the class name and two compartments below it: the first contains `+ waypointIndex` and the second is empty. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance.

cl_move_base_z::EvWaypoint216
< TSource, TOrthogonal >

+ waypointIndex
