

sc::event< EvWaypoint120  
< TSource, TObjectTag > >

```
classDiagram
    class sc_event["sc::event< EvWaypoint120< TSource, TObjectTag > >"]
    class cl_move_base_z_EvWaypoint120["cl_move_base_z::EvWaypoint120< TSource, TObjectTag >"]
    cl_move_base_z_EvWaypoint120 --|> sc_event
```

The diagram illustrates an inheritance relationship. The base class, `sc::event< EvWaypoint120 < TSource, TObjectTag > >`, is shown in a white box with two empty compartments below the name. The derived class, `cl_move_base_z::EvWaypoint120 < TSource, TObjectTag >`, is shown in a grey box with two additional compartments: one containing `+ waypointIndex` and another empty compartment. A blue arrow with an open triangle head points from the derived class to the base class.

cl\_move\_base\_z::EvWaypoint120  
< TSource, TObjectTag >

+ waypointIndex
