

boost::statechart::  
event< EvWaypoint221  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint221< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint221< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. At the top is a base class box with a light gray background, containing the text 'boost::statechart::event< EvWaypoint221< TSource, TOrthogonal > >'. Below it is a derived class box with a darker gray background, containing 'cl\_move\_base\_z::EvWaypoint221< TSource, TOrthogonal >' and a public attribute '+ waypointIndex'. A blue arrow points from the derived class box up to the base class box, indicating that the derived class inherits from the base class.

cl\_move\_base\_z::EvWaypoint221  
< TSource, TOrthogonal >

+ waypointIndex
