

boost::statechart::
event< EvWaypoint248
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint248< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint248< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. At the top is a base class box with a light gray background and a thin gray border. It contains the text 'boost::statechart::' followed by 'event< EvWaypoint248' on the next line, and '< TSource, TOrthogonal > >' on the third line. Below this text are two empty rectangular sections. At the bottom is a derived class box with a darker gray background and a thick black border. It contains 'cl_move_base_z::EvWaypoint248' on the first line, '< TSource, TOrthogonal >' on the second line, and '+ waypointIndex' on the third line. Below this is another empty rectangular section. A blue arrow points from the top of the derived class box to the bottom of the base class box.

cl_move_base_z::EvWaypoint248
< TSource, TOrthogonal >

+ waypointIndex
