

```
boost::statechart::  
event< EvWaypoint99  
< TSource, TObjectTag > >
```

A UML class diagram showing inheritance. The base class, `boost::statechart::event< EvWaypoint99< TSource, TObjectTag > >`, is represented by a white box with a black border. The derived class, `move_base_z_client::EvWaypoint99< TSource, TObjectTag >`, is represented by a gray box with a black border. A blue arrow with a hollow triangular head points from the derived class to the base class. The derived class box has three compartments: the top one contains the class name, the middle one contains the public attribute `+ waypointIndex`, and the bottom one is empty.

```
move_base_z_client  
::EvWaypoint99< TSource,  
TObjectTag >
```

```
+ waypointIndex
```
