

boost::statechart::
event< EvWaypoint134
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint134< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint134< TSource, TObjectTag >"]
    Derived --|> Base
```

The diagram consists of two class boxes. The top box is white and represents the base class `boost::statechart::event< EvWaypoint134 < TSource, TObjectTag > >`. It has three horizontal compartments: the top one for the class name, and two empty ones below it. The bottom box is gray and represents the derived class `cl_move_base_z::EvWaypoint134 < TSource, TObjectTag >`. It has three horizontal compartments: the top one for the class name, the middle one containing the public attribute `+ waypointIndex`, and a bottom one that is empty. A blue arrow with an open triangle head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint134
< TSource, TObjectTag >

+ waypointIndex
