

```
boost::statechart::  
event< EvWaypoint169  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by a light gray box with three horizontal sections. The top section contains the text 'boost::statechart::event< EvWaypoint169 < TSource, TObjectTag > >'. The middle and bottom sections are empty. The derived class is defined by a gray box with three horizontal sections. The top section contains 'cl\_move\_base\_z::EvWaypoint169 < TSource, TObjectTag >'. The middle section contains '+ waypointIndex'. The bottom section is empty. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint169  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
