

```
boost::statechart::  
event< EvWaypoint255  
< TSource, TObjectTag > >
```

The diagram shows a base class 'boost::statechart::event< EvWaypoint255 < TSource, TObjectTag > >' with three empty compartments. A derived class 'cl\_move\_base\_z::EvWaypoint255 < TSource, TObjectTag >' has two compartments: the first contains '+ waypointIndex' and the second is empty. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.

```
cl_move_base_z::EvWaypoint255  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
