

```
boost::statechart::  
event< EvWaypoint183  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the namespace boost::statechart and the event type EvWaypoint183, which is a template over TSource and TObjectTag. The derived class is cl_move_base_z::EvWaypoint183, also templated over TSource and TObjectTag, and it has a public attribute waypointIndex. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance.

```
cl_move_base_z::EvWaypoint183  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
