

boost::statechart::
event< EvWaypoint211
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint211< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint211["cl_move_base_z::EvWaypoint211< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint211 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class `boost::statechart::event< EvWaypoint211 < TSource, TOrthogonal > >`. It has two empty rectangular compartments below the header. At the bottom is a grey box representing the derived class `cl_move_base_z::EvWaypoint211 < TSource, TOrthogonal >`. It has three compartments: the first contains the class name, the second contains the public member `+ waypointIndex`, and the third is empty. A blue arrow with a hollow triangular head points from the top of the grey box to the bottom of the white box, indicating that the grey box inherits from the white box.

cl_move_base_z::EvWaypoint211
< TSource, TOrthogonal >

+ waypointIndex
