

boost::statechart::  
event< EvWaypoint233  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint233< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint233["cl_move_base_z::EvWaypoint233< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint233 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: `boost::statechart::event< EvWaypoint233 < TSource, TOrthogonal > >`. It has two empty rectangular sections below the text. At the bottom is a grey box representing the derived class: `cl_move_base_z::EvWaypoint233 < TSource, TOrthogonal >`. This box is divided into three horizontal sections: the top section contains the class name, the middle section contains the public attribute `+ waypointIndex`, and the bottom section is empty. A blue arrow with a hollow triangular head points from the top of the grey box to the bottom of the white box, indicating that `cl_move_base_z::EvWaypoint233` inherits from `boost::statechart::event`.

cl\_move\_base\_z::EvWaypoint233  
< TSource, TOrthogonal >

+ waypointIndex
