

boost::statechart::
event< EvWaypoint169
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint169< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint169["cl_move_base_z::EvWaypoint169< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint169 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: boost::statechart::event< EvWaypoint169 < TSource, TOrthogonal > >. Below it is a grey box representing the derived class: cl_move_base_z::EvWaypoint169 < TSource, TOrthogonal >. The derived class has an additional attribute: + waypointIndex. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint169
< TSource, TOrthogonal >

+ waypointIndex
