

```
boost::statechart::  
event< EvWaypoint244  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the text 'boost::statechart::event< EvWaypoint244 < TSource, TObjectTag > >' in its top section, with two empty sections below. The derived class is defined with 'cl\_move\_base\_z::EvWaypoint244 < TSource, TObjectTag >' in its top section, '+ waypointIndex' in its middle section, and an empty bottom section. A blue arrow points from the top of the derived class to the bottom of the base class, indicating inheritance.

```
cl_move_base_z::EvWaypoint244  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
