

```
boost::statechart::  
event< EvWaypoint170  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the namespace boost::statechart and the event type EvWaypoint170, which is a template over TSource and TObjectTag. The derived class is defined in the namespace cl\_move\_base\_z and inherits from the base class. It has a public attribute waypointIndex.

```
cl_move_base_z::EvWaypoint170  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
