

```
cl_move_base_z::CostmapSwitch  
::registerProxyFromDynamicReconfigure  
Server
```

```
graph LR; A[cl_move_base_z::CostmapSwitch::initialize] --> B[cl_move_base_z::CostmapSwitch::registerProxyFromDynamicReconfigureServer];
```

A diagram showing a call from the `initialize` method to the `registerProxyFromDynamicReconfigureServer` method. The `initialize` method is in a white box on the right, and the `registerProxyFromDynamicReconfigureServer` method is in a gray box on the left. A blue arrow points from the `initialize` box to the `registerProxyFromDynamicReconfigureServer` box.

```
cl_move_base_z::CostmapSwitch  
::initialize
```
