

```
boost::statechart::  
event< EvWaypoint194  
< TSource, TObjectTag > >
```

A UML class diagram showing inheritance. The base class, `boost::statechart::event< EvWaypoint194 < TSource, TObjectTag > >`, is represented by a white box with a black border. The derived class, `move_base_z_client::EvWaypoint194< TSource, TObjectTag >`, is represented by a grey box with a black border. A blue arrow with an open triangular head points from the derived class to the base class. The derived class has a public attribute `+ waypointIndex`.

```
move_base_z_client  
::EvWaypoint194< TSource,  
TObjectTag >
```

```
+ waypointIndex
```
