

```
boost::statechart::  
event< EvWaypoint128  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by a box with three horizontal compartments. The top compartment contains the text 'boost::statechart::event< EvWaypoint128 < TSource, TObjectTag > >'. The middle and bottom compartments are empty. The derived class is defined by a box with three horizontal compartments. The top compartment contains 'cl_move_base_z::EvWaypoint128 < TSource, TObjectTag >'. The middle compartment contains '+ waypointIndex'. The bottom compartment is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint128  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
