

```
boost::statechart::  
event< EvTopicMessageTimeout  
    < TSource, TOrthogonal > >
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvTopicMessageTimeout < TSource, TOrthogonal > >`, is represented by a white box with a thin black border. It has three horizontal compartments: the top one contains the class name, and the other two are empty. The derived class, `cl_multirole_sensor::EvTopicMessageTimeout`, is represented by a gray box with a thin black border. It also has three horizontal compartments: the top one contains the class name, the middle one contains the member `+ timerData`, and the bottom one is empty. A blue arrow with a hollow triangular head points from the top compartment of the derived class to the top compartment of the base class, indicating inheritance.

```
cl_multirole_sensor  
::EvTopicMessageTimeout  
< TSource, TOrthogonal >
```

```
+ timerData
```
