

boost::statechart::
event< EvWaypoint226
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint226< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint226["cl_move_base_z::EvWaypoint226< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint226 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: `boost::statechart::event< EvWaypoint226 < TSource, TOrthogonal > >`. It has two empty compartments below the name. At the bottom is a grey box representing the derived class: `cl_move_base_z::EvWaypoint226 < TSource, TOrthogonal >`. This box has three compartments: the first contains the class name, the second contains the public attribute `+ waypointIndex`, and the third is empty. A blue arrow with an open triangular head points from the derived class box up to the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint226
< TSource, TOrthogonal >

+ waypointIndex
